Re: U.S. Continuation-in-Part Patent Application of WILLIAMS, et al.
"Systems, Methods and Devices for a Telematics Web Services
Interface Feature"
Serial No.: 10/823,478
Date Filed: April 13, 2004
Our Ref.: 0308816.0176

Dear Ms. Coggins:

Enclosed please find the Filing Receipt and the Petition to Make Special filed on August 5, 2004 in the above-referenced patent application. PAIR indicates that the petition was entered on August 6, 2004, but has not yet been acted on, after 29 months. The first Office Action on this application is currently not expected until June 2008, according to the enclosed notice.

Pursuant to our earlier discussion regarding delayed review of Petitions to Make Special, I am writing to request that you have the Office of Petitions respond to this Petition to Make Special within one business day. This petition is in condition to be granted; the petition is routine and presents no novel issues; and there is no good reason for the Office's continuing failure to grant or respond to the petition.

This application is of material importance to our client, so any assistance you can provide would be greatly appreciated.

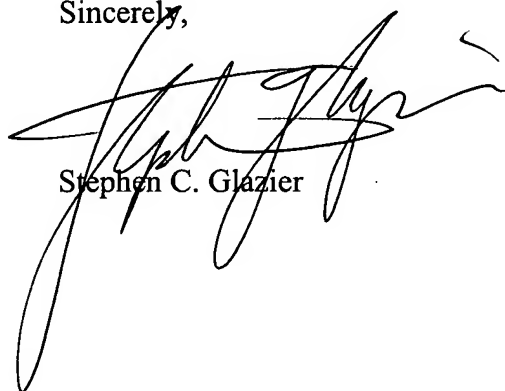

K&L GATES

Wynn W. Coggins, Esq.
January 5, 2007

UPDATED FILING RECEIPT

OC000000013917957

Date Mailed: 09/28/2004

Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Filing Receipt Corrections, facsimile number 703-746-9195. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Title

Systems, methods and devices for a telematics web services interface feature

Preliminary Class

709

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15**

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PETITION TO MAKE SPECIAL UNDER 37 CFR §1.102(d)

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313

Sir:

Applicant hereby petitions to make the above-identified U.S. patent application special pursuant to MPEP §708.02(VIII). Applicants have submitted herein a detailed discussion of the references, which discussion points out, with the particularity required by 37 C.F.R. §1.111(b) and (c), how the claimed subject matter is patentable over the references pursuant to MPEP §708.02(VIII).

If it is determined that the pending claims are not directed to a single invention, Applicants will make an election without traverse as required under MPEP §708.02(VIII)(B).

Applicants submit that a pre-examination search has been made by a professional searcher in Class 701, subclasses 29, 31, 33, 35 and 207. Additionally, patent publications were searched in the European Patent Office and the Japanese Patent Office.

Enclosed herewith are copies of the following references which are deemed to be the most closely related to the subject matter encompassed by the present claims.

<u>U.S. Patent/Publication No.</u>	<u>Inventor(s)</u>
6,487,494	Odinak et al.
6,609,051	Fiechter et al.
2003/0004624	Wilson et al.
2004/0044454	Ross et al.

DETAILED DISCUSSION OF THE REFERENCES

U.S. Patent 6,487,494 (Odinak et al.)

Odinak et al. discloses a system and method for reducing the amount of repetitive data sent by a server to a client for vehicle navigation. The system includes a computer-based vehicle unit located in a vehicle, a gateway configured to wirelessly send and receive trip information to and from the vehicle unit, and a computer-based server in communication with the gateway over a network. The vehicle unit wirelessly receives signals from a computer-based server that includes the desired navigation information in packet form. The vehicle unit includes a user interface component that presents the received navigation information and records user requests. The server processes the requests, generates a trip plan according to the navigation information and sends the generated trip plan back to the vehicle unit via a gateway when a request has been completed. (see abstract).

However, Odinak et al. does not disclose or suggest a web services interface in communication with a secondary system, wherein the web services interface comprises at least one processor configured to retrieve, receive, analyze and transmit data in response to a request from the secondary system, wherein the processor is configured to process at least one servlet module stored thereon to extract at least one parameter from a first message, and transmit the at least one parameter to at least one enterprise Java bean, wherein *the at least one enterprise Java bean is a stateless session bean*.

U.S. Patent 6,609,051 (Fiechter et al.)

Fiechter et al. discloses a method and system for an improved vehicle monitoring system in order to provide a cost-effective and scalable system design for industrial application through the use of machine learning and data mining technologies on data acquired from a plurality of vehicles to create models. Frequent acquisition of vehicle sensor and diagnostic data enables comparison with the created models to provide continuing analysis of the vehicle with respect to repair, maintenance and diagnostics. (see abstract).

However, Fiechter et al. does not disclose or suggest a web services interface in

communication with a secondary system, wherein the web services interface comprises at least one processor configured to retrieve, receive, analyze and transmit data in response to a request from the secondary system, wherein the processor is configured to process at least one servlet module stored thereon to extract at least one parameter from a first message, and transmit the at least one parameter to at least one enterprise Java bean, wherein *the at least one enterprise Java bean is a stateless session bean.*

U.S. Patent Application Publication 2003/0004624 (Wilson et al.)

Wilson et al. discloses a system and method for monitoring operating parameters of a machine (such as a vehicle) and producing diagnostic and/or prognostic results. Active, semi-active, or semi-passive sensors are wirelessly linked with an interrogator that selectively interrogates the sensors, such as through transponders in wired communication with the sensors. A data concentrator or processor analyzes data from certain sensors and generates diagnostic/prognostic conclusions, in some cases using additional data selectively requested from and acquired by the sensors. In some embodiments, raw or abstracted data is communicated with a management center that provides troubleshooting information (again, possibly using additional, selectively acquired data), makes resource management decisions (such as preparing parts or labor resources to make a repair), and tracks problems in all or a subset of the machines being managed. (see abstract).

However, Wilson et al. does not disclose or suggest a web services interface in communication with a secondary system, wherein the web services interface comprises at least one processor configured to retrieve, receive, analyze and transmit data in response to a request from the secondary system, wherein the processor is configured to process at least one servlet module stored thereon to extract at least one parameter from a first message, and transmit the at least one parameter to at least one enterprise Java bean, wherein *the at least one enterprise Java bean is a stateless session bean.*

U.S. Patent Application Publication 2004/0044454 (Ross et al.)

Ross et al. discloses a method for providing vehicle settings to a telematics unit in a mobile vehicle that includes receiving a vehicle settings update signal at a call center from the

telematics unit and sending vehicle settings from the call center to the telematics unit. The method may additionally include implementing the vehicle settings in the mobile vehicle. The method may further include sending an update flag signal from the call center to the telematics unit. The method may additionally include receiving at least one user preference at the call center via a web portal interface. The step of receiving at least one user preference may further include sending an update flag signal from the call center to the telematics unit responsive to receiving the at least one user preference at the call center via the web portal interface. (see abstract).

However, Ross et al. does not disclose or suggest a web services interface in communication with a secondary system, wherein the web services interface comprises at least one processor configured to retrieve, receive, analyze and transmit data in response to a request from the secondary system, wherein the processor is configured to process at least one servlet module stored thereon to extract at least one parameter from a first message, and transmit the at least one parameter to at least one enterprise Java bean, wherein *the at least one enterprise Java bean is a stateless session bean.*

THE PRESENT APPLICATION

Embodiments of the present application relate to a telematics system that includes a web services interface in communication with a secondary software system, wherein the web services interface comprises at least one processor configured to retrieve, receive, analyze and/or transmit data in response to a request from the secondary software system. In addition, the telematics system includes a gateway system configured to transmit data through a network to an in-vehicle telematics device and receive data from the in-vehicle telematics device, wherein the data comprises diagnostic data and/or location-based data associated with a host vehicle. The telematics system also includes a database in communication with the gateway system and the web services interface, wherein the database is configured to receive and store data transmitted from the gateway system and/or the web services interface.

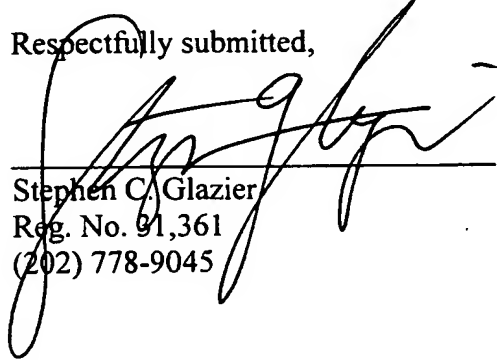

For example, claim 10 includes a web services interface in communication with a secondary system, wherein the web services interface comprises at least one processor configured to retrieve, receive, analyze and transmit data in response to a request from the

secondary system, wherein the processor is configured to process at least one servlet module stored thereon to extract at least one parameter from a first message, and transmit the at least one parameter to at least one enterprise Java bean, wherein *the at least one enterprise Java bean is a stateless session bean.*

As discussed above, Odinak et al., Fiechter et al., Wilson et al. and Ross et al. fail to disclose or suggest one or more elements in claim 10.

Therefore, the present application claims subject matter which is not disclosed, taught or suggested by the foregoing references and is patentable in light thereof. Accordingly, granting of the Petition to Make Special and expedited examination of the claims in the present application are earnestly solicited.

Respectfully submitted,

Stephen C. Glazier
